### **DETAILED ACTION**

1. Examiner spoke with Applicant's attorney, Sean McGinn, on October 23, 2003 concerning which claims are to be examined. Claims 10-14 were examined in the parent application to this divisional application. Only claims 15-17 and 22 are to be examined. This is also stated in an Interview Summary between Sean McGinn and Sumati Lefkowitz filed in the case as Paper Number 4 where claims 10-14 are to be cancelled.

#### ***Specification***

2. The disclosure is objected to because of the following informalities: On page 14, line 10, 'In Figure 303', should be 'In step 303'.

Appropriate correction is required.

#### ***Claim Objections***

3. Claim 17 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the

applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 15,16,22 are rejected under 35 U.S.C. 102(e) as being anticipated by Takano et al. (USPN 5790874A). As appears in claims 15 and 22, Takano et al. discloses obtaining an opcode group and obtaining a control signal therefrom, determining whether said control signal is active, if said control signal is determined to be active setting the control signal to active, running a test case for the opcode group to determine whether the opcode passes, if said opcode group passes marking the control signal in column 9, lines 38-64.
6. As per claim 16, Takano et al. discloses determining whether any other control signals exist for the opcode group, when no more control signal exists, obtaining a next opcode group and testing and determining whether control signals of said next opcode should be marked, and when no more opcode groups exist setting all marked control signals to active and executing a regression analysis thereon in column 10, lines 36-67 – column 11, lines 1-9.
